

September Progress:

1. Read the paper, “Training Neural Networks to Approach the Optimum Bayes Estimator in Dense Multi- Emitter Localization”.
2. Change my previous draft so it aligned with this paper. I’ve completed the first four sections.

October Plan:

1. Complete the remaining sections. Add propositions and theorems based on the result, if required.
2. Run the simulation again for improved results.
3. Send it to you for revision.
