

July Progress:

1. Completed the coding for ViT Regression, ViT-PF, and ViT-PF for the movie data. I have attached the reconstructed images for Dataset-1.
2. I took an online course on "Signals and Systems" to better understand the physics behind our research problem.
3. I have also been reading the book *Statistics of Signal Processing*. This has helped me understand the mathematics behind the core papers you shared. I have not yet finished it, but I am revising the statistical concepts relevant to our research for a better understanding.

August Plan:

1. I will further improve ViT-PF and complete the emitter detection for a random number of emitters.
2. I will complete the first draft of the ViT-PF paper, as I now have the results ready.
3. I will complete the required topics from *Statistics of Signal Processing* for our research.
